

SETTING UP YOUR SYSTEM

1

UNPACK PACKAGE CONTENTS

Unpack the system, all accessories, and documentation.

5

READ THE USER'S MANUAL

NOTE: Wait for the blue LED on the iomega NAS system to stop flashing, then insert the Solutions CD into your CD-ROM drive. Detailed instructions are shown in the User's Manual on the Solutions CD. To view the User's Manual you must have Microsoft® Internet Explorer® 5.0 or higher or Netscape® 6.1 or higher installed on your system.

2

SYSTEM PLACEMENT

The system can be stacked, or rack mounted. See the User's Manual on the Solutions CD for detailed information.

NOTE: Place the system on a sturdy surface with sufficient airflow both in front of and behind the unit.

4

POWER UP THE SYSTEM

Turn on the switch ① on the back of the system, then press the diamond-shaped button on the front of the system.

3

CONNECT THE CABLES

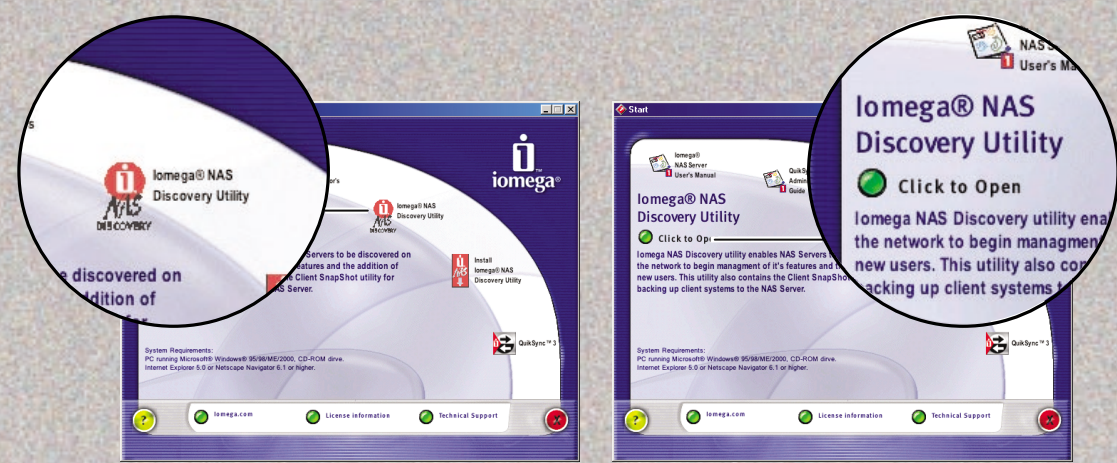

When connecting the system to a network use the **gray** cable and connect it to the open LAN port. Use the **red** Ethernet crossover cable when connecting directly to a workstation. Choose the appropriate power cable for your country and connect it to the system and a grounded power outlet.

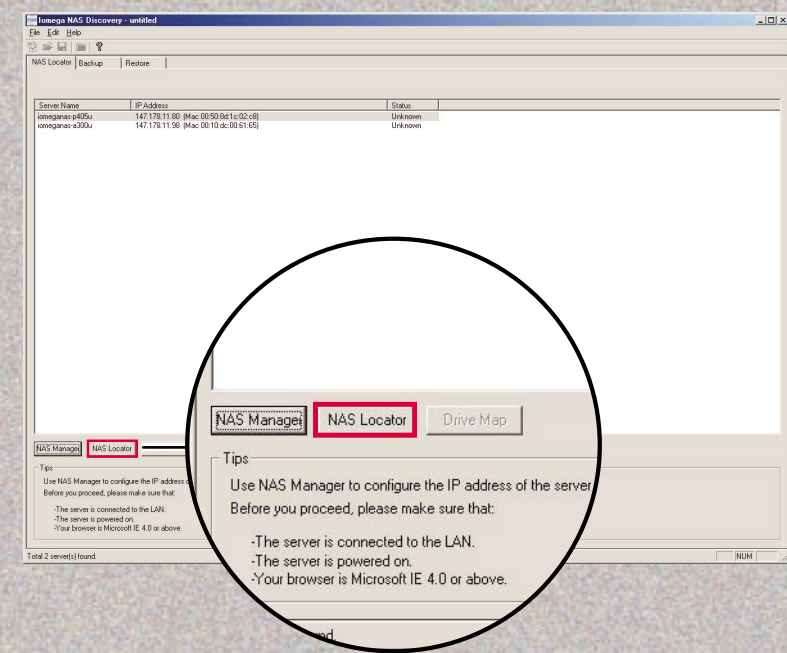

6 COMPLETE THE SYSTEM SETUP

- 1. Register your Iomega NAS system following the instructions on screen. Then select the NAS Discovery Utility icon from the Solutions CD menu. Select “Click to Open” to run the software.

6-1

- 2. If the Discovery window doesn't list your Iomega NAS, manually click the **NAS Locator** button.

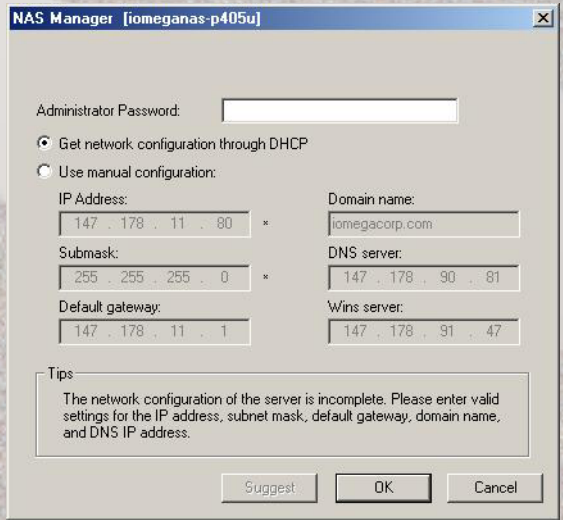

6-2

- 3. If Status indicates DHCP, proceed to Step 7. Otherwise, follow the procedure below.

If status is Unknown or Bad, your network doesn't have a DHCP server. The IP address must be manually assigned, as described in the following steps.

- 1. Click the **NAS Manager** button.
- 2. Enter a valid **IP address** and **subnet mask**, or click on the **suggest** button and the system will determine them for you.
- 3. Enter the **Default Gateway**, **Domain Name**, **DNS Server**, and **WINS Server** (if known) or leave them blank and ignore the warning messages.
- 4. Enter the **Iomega NAS password** (default is “ADMIN”) in the Password box.
- 5. Click the **Apply** button. Wait while Discovery looks for the server. If the Discovery does not find the server, see Troubleshooting in the User's Manual on the Solutions CD.

6-3

7 MAP A DRIVE

Once a valid IP address has been assigned, click the **Drive Map** button. Select a network drive letter. If the system asks for a user name before mapping the drive, enter **guest** and leave the password blank. Repeat on each client computer.

8 COMPLETE CONFIGURATION

The Iomega NAS volume should now be available for administration.

9 VERIFY YOUR NAS IS UP-TO-DATE

Check Iomega's website at <http://www.iomega.com/software/nas.html> for the current system update. See the User's Manual for more information on updating your NAS.

CUSTOMER SUPPORT OPTIONS

Please see the User's Manual on the enclosed CD or visit our award winning web support site for a complete list of worldwide support options including Email, one-to-one Live Chat, and Customer Support Center phone numbers and hours of operation.
